

Quick overview

WORKING VERSION 0.1

ONE ACCESS SOURCE

Access design: Airtable Logins / Access is the control point for individual app checkboxes. A protected sync writes shared grants; every app checks its own grant.

FIVE MAIN TABS

OFFLINE

Cached content remains available. Messages written offline stay on this device as Waiting to send and retry after reconnection.

COMMUNITY ACCESS

Roles do not automatically expose feeds or people. Spaces and memberships decide what each person can see and do.

CURRENT VERSION NOTE

This overview documents the current build for review. Translation, media uploads, and the final Airtable field mapping/sync are not active yet. Rebuild after the final app and permissions are approved.

Open the menu in Community to download the complete guide.
